Flush doors

Facade & Garage doors

Flush door for covering on-site

BeluGa GARAGEDOORS

Flush Sectionaldoor covered with aluminum composite

Flush BeluGa garage doors by BeluTec

Unique, exclusive and invisble

Garage doors, that are invisble from the outside do have a high claim for integration in the facade. The flush BeluGa garage doors by BeluTec provide the best freedom for the planning.

Consulting, planning & installation - complete service from one source!

You get all of our flush-mounted doors in different aluminum panels with free color choice,
e.g. cassettes, flat plate and lamellae are attached invisibly.

Of course, you can choose among the standard colors below, BeluGa colors and all other RAL colors.
In addition, we offer you the possibility to equip your flush doors with a very individual design (only for smooth surfaces available).

Please feel free to contact us!

Covering is mounted invisible

Flush-fitting doors with wooden covering

individually, exactly to your wishes

- maximum design and design freedom
- integrated ventilation function
- flush installation in the facade with individually realizable surface requirements
- high-quality frame-rung substructure
- individual covering allows complete integration into the facade

Architectural house, flush door with wooden covering

Homogeneous facade in closed condition

Invisible wood covering without visible screwing of the individual slats

Flush garagedoor for two cars covered with wood of larch tree

The facade-flush and flush-fitting doors from BeluTec allow absolute freedom in the individual design of your garage door. Whether wood, aluminum cassettes or Trespa - your imagination knows no bounds.
As you can see in the pictures, the covering can be mounted invisibly from the outside, so that no screws or similar are visible. The facade cladding with wood is currently in great demand. Our frame rungs substructures can be clad with any conceivable wood, so your creativity can be running.

BeluTec offers you the opportunity to have your flush-mounted garage door, as well as the rest of the facade, be covered on-site by your facade builder. The pictures of our projects shown here show how beautifully the garage door can be integrated into the facade. When closed, the door in the facade can only be guessed at and does not disrupt the uniform design.
We are happy to plan individually with you your new garage door. We set no limits to your imagination and gladly implement extraordinary and exclusive wishes!

Your advantages with BeluTec doors

Standard or individual

No mold growth!
through the integrated,
automatic ventilation function

Great doors!
Width up to 10 meters
Weight up to 1.000 kg

No headroom loss!
maximum clearance

Quality made in Germany
We manufacture exclusively in Germany

Strong drive!
High opening speed

Complete performance
all from one hand-trained experienced staff

Side-Sectionaldoor private house, smooth panels

Sectional doors in various designs

For industrial or private buildings

Sectional doors are suitable for both private buildings and industrial buildings. Due to the different possibilities of the covering, these doors can be adapted to almost any facade. Through flush mounting, these doors can also merge completely with the facade. Various installation variants of our sectional doors allow use even with a small side space or fall. Above is a Side-Sectionaldoor shown, which stands out already by the lateral opening mechanism of other goals. The surface is kept smooth in lamello.

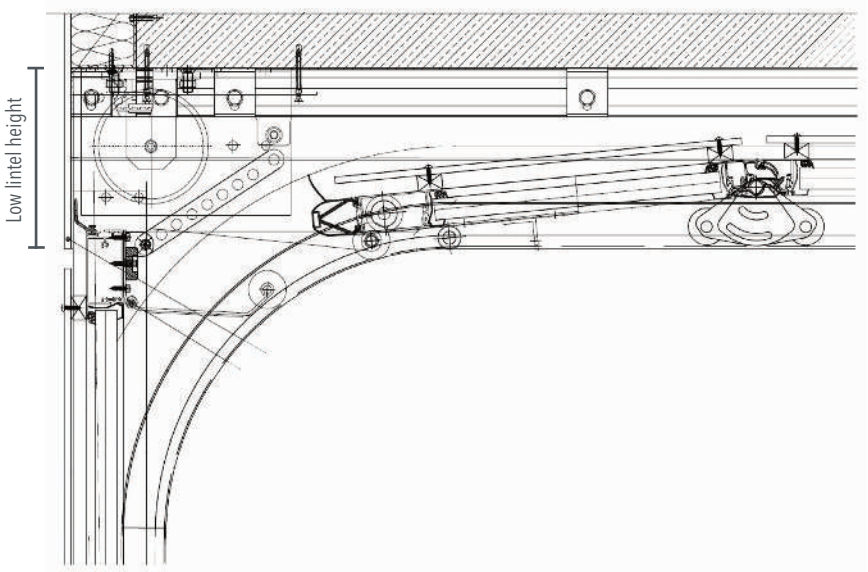
In the project, which is shown below, BeluTec supplied an approx. 5000 x 2200 mm large sectional sectional door. The door consists of an aluminum frame rungs construction with foamed steel sandwich panels. The door leaf is divided into three sections in width and four sections in height. It was prepared for the inclusion of an on-site planking of 10 mm Trespa and 20 mm lathing. The top section of the flush sectional sectional door was designed as a tilting wing for ventilation.

Door leaf visually adapted to the rest of the design

Homogeneous facade in closed condition

Architectural house, aluminum frame rungs construction with Trespa planked

Flush standard doors and individual planning for you



Multi-Comfort-Drive

The drive for the special needs!

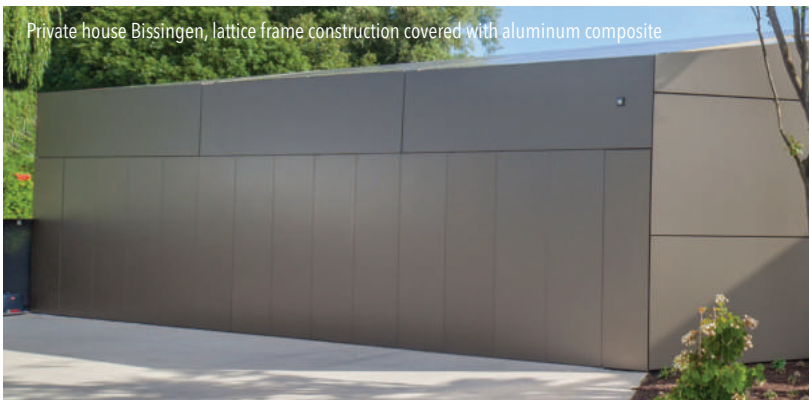
You can get our flush-mounted doors with different drives.
For special needs we offer the MKA (multi-comfort drive). This is characterized by the safety aspect of the emergency hand chain for possible power outages and the closing edge safety device. The drive rail is made of aluminum and equipped with a noiseless and maintenance-free toothed belt.

Furthermore, the carriage has quadruple ball bearing and polyamide sheathed rollers, which support a very quiet running. With the MKA you get a frequency converter including safety and radio package. This includes both a light barrier, as well as a closing edge security whereby a maximum clearance height can be achieved.
For maximum flexibility, the drive head can be mounted on different sides and positions.

Aluminum lattice-frame-construction, planking on-site

Integrated ventilation function when the door is closed at the bottom

Private house, Tübingen, lattice frame construction covered with Alucobond



Private house Bissingen, lattice frame construction covered with aluminum composite

Horizontal folding door made of glass with ZIP
